

Deep Learning Systems

Seminar No 1

Artificial Intelligence and Artificial Neural Networks

1. Choose one AI tool from the scheme below or freely from any existing tools.
2. One AI tool can be chosen only by one student so after choosing a tool you must fill out this [GoogleSheet!](#)
3. Prepare a MS Power Point 5-10 min presentation. Make connections to the lecture material.
 - a. Purpose of the tool
 - b. Type of used neural network(s). If you can't find information you have to present your opinion and give reasons why you think so. Shortly describe that type of neural network(s).
 - c. What are the main differences from other similar AI tools?
 - d. Would you recommend this tool to someone else? If yes/no, why?
